

Conveyor Systems

Belt and chain conveyors are all in the array of conveying systems available from Fulghum Industries, suppliers of industrial materials handling equipment and specialists in forest products processing.

www.fulghum.com

Rugged Fulghum chain conveyors transport both logs and wood residues. Above, a chain conveyor moves logs from a Fulghum live deck chute to a chipper infeed. In shortwood chip mills, deckwide configurations of these chain conveyors move logs on the live deck to the debarker and through processing.

Fulghum's versatility in material handling extends to many conveyor applications (such as above and below) to move wood chips and/or bark from a debarker and chipping lines to screening systems, storage, truck/rail loading or to chip digesters and bark boilers. Automatic controls are installed in Fulghum-designed systems serving both woodyards and satellite chipmills.

Fulghum belt conveyors, such as that above, transport wood chips and/or bark from truck dumpers to storage.
